DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-6 and 10-19 rejected under 35 U.S.C. 103(a) as being unpatentable over Yon et al. in view of *How the Internet Works*.

Yon et al. teaches a method and system for selecting product colors. Specifically, the Yon et al. teaches a color database (matchable color database) for a product (column 2; lines 30-31). In addition, the host computer provides an interface that permits the purchaser to interact with the host computer system. The interface includes an output portion and an input portion. The output portion conveys information from the host computer system and the input portion is used to convey information to the host computer system (column 2; lines 56-67). Examiner notes that this related to the conditions-designating processing unit.

Yon et al. further teaches that once the host computer revives color information from the user, a search of the color database of available colors for the product commences (column 4; lines 26-28). Examiner notes that this represents the color data transmitting unit.

Yon et al. also teaches an indexing tool which is a spectrum of colors transmitted from the host computer to the purchaser computer for display (column 6; lines 20-24). Examiner notes that the spectrum represents Applicant's gamut. Yon et al. also teaches a virtual color table where the background is the target color and the "n" closest are swatches (column 5; lines25-27). Examiner notes that this represents Applicant's virtual item coloring process unit.

You et al. further teaches that the system is capable of determining whether a vendor has a product in the target color or a color close enough to the target color (column 3; lines 15-20). Examiner note that this represents available stock confirming unit.

Application/Control Number: 10/026,823

Art Unit: 3627

Yon et al. also teaches that the host computer includes an order database, access control database, database server and firewall. Where the order database is used to store sample orders made by a purchaser and/or product orders. The access control database operates in conjunction with the firewall to prevent unauthorized access to the host computer and enforce limitations on the authorized access (column 6; lines 63-67 and column 7 lines 1-20). Examiner notes that this represents the customer database and user identification feature required by Applicant's claims.

Examiner notes that it is inherent to the system of Yon et al. that the host computer store information related to dye, resin and pigment. One of ordinary skill in the art would recognize that these are fundamental to the coloring process and in order for the system of Yon et al. to provide colors and specifically custom colors this information must be part of the color database.

Yon further teaches a customer to initially identify the product in which they are interested (see for example column 3, lines 34-36). Examiner notes that this represents a predetermined identification of use correlated to the user. However, Yon does not specifically teach storing this product selection (use) in a customer database.

How the Internet Works teaches database used for the implementation of virtual shopping carts, which are portions of a Web site where customers place items (uses correlated to the user) they are considering buying. Items can be taken in and out of the cart (database) prior to buying. Virtual shopping carts are used in order to make the shopping experience more efficient. It would have been obvious to one of ordinarily skill in the art at the time of the invention modify the selection of products taught by Yon to include storage of the selected product in a virtual shopping cart as taught by How the Internet Works. One of ordinary skill in the art would have been motivated to modify the references in order to make the shopping experience of Yon more efficient.

Response to Arguments

Applicant's arguments with respect to claims 1-6 and 10-19 have been considered but are moot in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James A. Kramer whose telephone number is (571) 272 6783. The examiner can normally be reached on Monday - Friday (8AM - 5PM).

Application/Control Number: 10/026,823

Art Unit: 3627

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Alexander Kalinowski can be reached on (571) 272 6771. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
